

+91-7987544822

PROFILE SUMMARY

- Results-driven Software Testing & QA professional with 7+ years of experience in Manual and Automation Testing across Web, API, and Mobile Applications.
- Expertise in designing and implementing robust automation frameworks using Selenium WebDriver, Cypress, Playwright, and BDD Cucumber to accelerate testing cycles and improve product quality.
- Skilled in end-to-end testing including Functional, Regression, Smoke, Performance, and Cross-Browser Testing to ensure seamless application performance.
- Hands-on experience in API Testing & Validation using Postman and Rest Assured, ensuring back-end reliability and data integrity.
- Proficient in CI/CD pipelines leveraging Jenkins, Maven, and Git to automate test execution and enable faster, error-free delivery.
- Strong SQL and database validation skills, ensuring accurate data processing and consistency across systems.
- Experienced in Agile and Scrum environments, collaborating with cross-functional teams to mitigate risks, streamline processes, and improve release quality.
- Known for driving process improvements, mentoring junior QA engineers, and fostering a culture of quality, efficiency, and continuous improvement.

CORE COMPETENCIES

Automation Framework Development Defect Management & Root Cause Analysis
Manual Testing Expertise Performance & Load Testing
API & Back-End Testing Cross-Browser & Mobile Testing
Test Strategy & Planning Test Data & Environment Management
Continuous Integration / CI-CD Quality Metrics & Reporting
Agile & Scrum Practices Team Mentorship & Collaboration

EDUCATION

- B.Tech. in Mechanical Engineering from CSVTU with 72% in 2018

CERTIFICATIONS

- AWS AI Practitioner
- ISTQB Foundation Level
- JLPT N4

TECHNICAL SKILLS

Automation Tools: Selenium WebDriver, Cypress, Playwright, Rest Assured, Postman
Languages & Frameworks: Java, JavaScript, TypeScript, C#, TestNG, BDD Cucumber, Framework Design
Testing Expertise: Manual Testing, Regression Testing, Performance Testing, API Testing, Mobile Testing, Smoke Testing
DevOps & Tools: Jenkins, Jira, SQL, Git, CI/CD pipelines, Maven
Other Tools: SelectorsHub, AutoIT, Katalon Recorder

WORK EXPERIENCE

Since 07th November 2026: IBM India Pvt. Ltd. as Senior Test Specialist

Key Result Areas:

- Collecting business requirements and formulating test scenarios, test data, test cases, and detailed reports.
- Analyzing business requirements and preparing test scenarios, test cases, test data, and detailed test execution reports.
- Designing and maintaining automated test scripts using Playwright with TypeScript for web application testing across supported browsers.
- Performing functionality, regression, and integration testing to ensure application quality and business requirement coverage .
- Managing defects in JIRA, collaborating with developers and Business Analysts, and supporting defect verification through UAT.
- Maintaining automation pipelines and supporting CI/CD execution through Jenkins and GitHub Actions .
- Implementing IQM-based automated test case generation by analyzing incoming business emails and requirement communications to quickly derive structured test scenarios and test cases.
- Supporting Salesforce-based testing activities, including validation of CRM workflows such as lead creation, case management, opportunity tracking, and data synchronization with backend insurance systems.

From 13th December 2021 to 4th November 2025: Fujitsu Consulting India Pvt. Ltd. as Test Associate

Key Result Areas:

- Collecting business requirements and formulating test scenarios, test data, test cases, and detailed reports.
 - Designing and implementing Page Object Model frameworks from the ground up.
- Executing data-driven, cross-browser, API, and parallel testing to ensure robust coverage.
 - Building and maintaining automation pipelines for seamless CI/CD integration.
- Transforming manual test cases into automation suites covering smoke and regression testing.
 - Preparing weekly and monthly status reports while reviewing and analyzing test outcomes.
- Collaborating with cross-functional teams and clients to drive defect management and test execution.
 - Validating backend data integrity through SQL queries.
- Developed automated test scripts using Playwright with TypeScript for cross-browser web application testing.
- Crafting and executing REST API automation scripts using Rest Assured with Java and TestNG to validate endpoints, payloads, and status codes.
- Performing error handling, negative testing, and boundary validations to strengthen API reliability and robustness.
- Automating end-to-end API workflows, including chained requests, authentication (OAuth2, JWT tokens), CRUD operations, and response verification.

From 3rd October 2019 to 4th December 2021: Metal Power Pvt. Ltd. as Junior Associate

Key Result Areas:

- Created and executed comprehensive test cases, evaluated outcomes, and documented defects.
 - Engineered and sustained automation infrastructure leveraging Selenium.
- Performed regression, sanity, and integration testing using Selenium and API testing tools.
 - Automated test execution and reporting processes through Jenkins CI.
 - Authored automation test scripts with Selenium WebDriver and TestNG in Java.
 - Validated backend data via SQL queries and compiled detailed reports.
 - Partnered with cross-functional teams to deliver quality assurance objectives.

From 23rd November 2018 to 30th September 2019: Suryakiran Earthmovers Pvt. Ltd. as Technical Support Associate

Key Result Areas:

- Gained hands-on experience with task management software and digital collaboration platforms.
- Coordinated cross-functional teams ensure timely delivery of technical and operational requirements.
- Managed resource allocation and task prioritization to meet dynamic client and internal demands.
- Implemented process improvements that streamlined communication between departments and reduced delays.

- Interpreted client requirements and translated them into actionable insights for platform and feature validation
- Tested listing workflows and lead generation funnels to ensure seamless customer experience.
- Trained new consultants on platform usage, troubleshooting techniques, and basic QA practices.
- Monitored performance metrics and provided feedback to enhance team productivity and morale.

PROJECTS MANAGED

Title: Macquarie Asset Management (MAM) | Period: 08 Months

- Analyzed business requirements, emails, and requirement communications to identify test scenarios and derive structured test cases using IQM.
- Leveraged IQM capabilities to accelerate test case generation and improve coverage across functional and regression testing.
- Reviewed and validated IQM-generated test cases against business requirements to ensure accuracy, completeness, and traceability.
- Identified gaps, edge cases, and negative scenarios in generated test coverage and enhanced test cases accordingly.
- Collaborated with Business Analysts, developers, and QA teams to validate requirements and ensure effective adoption of IQM - generated test assets.
- Salesforce - Key Result Areas
- Performed functional and integration testing of Salesforce CRM workflows, validating business processes across different Salesforce modules.
- Validated Accounts, Contacts, Leads, Opportunities, and Cases based on defined business requirements and workflows.
- Tested Salesforce data flow and integration with backend systems, ensuring data consistency and accuracy across applications.
- Designed and executed test scenarios covering field validations, workflows, approvals, business rules, and user interactions.
- Performed regression and end-to-end testing to ensure Salesforce changes did not impact existing business processes.
- Validated reports, dashboards, and CRM data to ensure accurate business information and reporting.
- Collaborated with cross-functional teams to analyze defects, perform root-cause validation, and support successful releases.

Title: Nissan Motors Corporation | Period: 12 Months

- Analyzed Nissan's strategic initiatives in innovation, sustainability, and advanced automotive technologies.
- Developed automated test scripts using Playwright with TypeScript for web application testing.
- Executed research on Electric Vehicle (EV) development, renewable energy solutions, and autonomous driving advancements.
- Evaluated smart vehicle technologies and assessed their impact on global markets.
- Documented Nissan's future vision for mobility, including next-generation EVs and strategic partnerships for sustainable transportation.
- Synthesized insights to understand Nissan's leadership role in shaping the future of the automotive industry.

Title: Tokio Marine Life Insurance Company | Period: 24 Months

- Executed system integration testing for multiple releases, ensuring seamless delivery across projects.
- Validated functional and technical changes across systems, identifying and resolving discrepancies.
- Collaborated with cross-functional teams to coordinate testing schedules and deliverables.
- Documented test cases, results, and defects to improve system quality and release readiness.

Title: Salesforce Administrator Project | Period: 23 Months

- Configured Salesforce CRM, customizing standard objects like Accounts, Contacts, and Opportunities to match business requirements.
- Automated workflow and approval processes to streamline sales operations.
- Designed reports and dashboards to track sales performance and monitor key metrics.
- Migrated existing data into Salesforce while ensuring data integrity and accuracy.
- Trained staff and delivered user documentation to ensure smooth adoption and ongoing system
